

Urgency weight schedule

$$\{\alpha_i^w\}$$

Effect on urgency-weighted remaining time

$$\tilde{d}_{\text{rem}}^w(i) = \alpha_i^w \cdot d_{\text{rem}}^w(i)$$

---- $d_{\text{rem}}^w(i)$: total remaining time ■ $\tilde{d}_{\text{rem}}^w(i) = \alpha_i^w \cdot d_{\text{rem}}^w(i)$: exposed to iteration i ■ reserve withheld for future iterations
